

ATV BEARING GREASER TOOL / OUTIL DE GRAISSAGE DES ROULEMENTS POUR VTT

It's a well known fact that the stock wheel bearings are dangerously low on grease right from the factory and bearings will wear out quickly if you don't pack them with additional grease. Keep them running longer and stronger by using this trick bearing greaser. It handles all the dirty work for you. Just remove the wheel and axle nut, slide the greaser in place and pump it full of grease. You'll be amazed at how much grease they will take. Even old bearings will benefit, getting rid of any water or dirt that may have built up in the bearing possibly causing premature failure. Billet aluminum construction with black anodized accents. Includes grease zerk and O-ring.
