Ultimax 3 has evolved into Ultimax Pro.

New Pro belt features a thicker cross section so more surface area contacts the clutch; this means less slippage over a broader speed range for quicker acceleration. New cog design dissipates heat and aids flexibility. Cooler running belts mean better performance and longer lasting belts. Run cool, run long, run fast with Ultimax Pro

The Genius of Continuous Evolution

LE GÉNIE DE L'ÉVOLUTION CONTINUE

The next generation of Continuously Variable Transmission (CVT) belts.

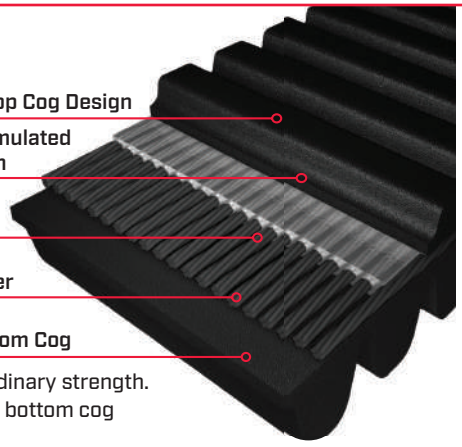
G-Force belts can handle even the most demanding off-road conditions. Just drop in a G-Force belt and be on your way for work or play.

G-Force

Gates G-Force Continuously Variable Transmission (CVT) belts are the ultimate, high-tech component for transferring power on your ATV, UTV, snowmobile or other powersports equipment.

Progressive Design and Technology

- Exceeds Original Equipment technology and durability
- High performance neoprene rubber
- Advanced tensile cord materials with 5 times the strength of steel
- Advanced trapezoid top notch and rounded cog design
- Superior flexibility and heat dissipation
- Drop-in Installation with no clutch adjustment required



G-Force C12

Gates all-new G-Force C12 belt is a revolutionary breakthrough in CVT belt design. It is the first belt of its kind with a carbon tensile cord for exceptional strength, flexibility, durability and performance in the most demanding off-road and on-the-job conditions.

Why Carbon Tensile?

- Minimal stretch under load results in consistent shifting RPM
- Allows for maintaining peak power throughout the shift curve
- Wears evenly to reduce belt failure due to edge cord pullout

Excellence in Engineering

Strength: Utilizing a carbon tensile cord, combining minimal stretch with extraordinary strength.
Flexibility: High performance neoprene with a trapezoidal top-notch and rounded bottom cog design maximizing heat control and flexibility.
Durability: Carbon tensile cords are bonded to aramid fiber loaded rubber with specially formulated adhesion gum.
Strength: Utilizing a carbon tensile cord, combining minimal stretch with extraordinary strength.

G-FORCE™ REDLINE™ CVT BELT

Why G-Force™ RedLine™ CVT Belts?

- Greater heat resistance and recovery, even under severe duty cycles.
- Optimized, patented EE compound maximizes axial stiffness enabling belts to run at higher continuous torques or loads.
- Innovative design results in better acceleration, higher top speeds, less speed ratio and energy loss in extreme off-road environments.
- Improved durability, crack and wear-resistance means a longer-lasting, high-performance power transmission belt for the most demanding applications.
- Reduced environmental risk — made without harmful chlorinated compounds.

VENOM TIED DRIVEN CLUTCH (UNCALIBRATED)

CODE C I KEYWORD 16B

EMBRAYAGE SECONDAIRE VENOM À CAMES LIÉES (NON CALIBRÉ).

Venom Industries introduces the most advanced driven clutch in the snowmobile industry. The Venom Tied Driven Clutch is an improvement from the TSS-04, in that the moveable sheave opens axially to the stationary sheave without rotational movement. This translates to no scrubbing motion on the belt face producing less heat and friction. Additionally all torque is transmitted through the helix, making clutch tuning much more precise. This clutch was developed using the extensive testing and design resources of Venom.

- Instant Back shift
- Cooler Running
- Increased Belt Lift
- No Engine Reverse Clunk
- Unrivaled Torque Sensing
- Helix Angles Typically 14° Higher Than TSS-04
- Greater Efficiency Allows Lower Spring Rates
- Higher Top End
- Eight Years of Developing and Testing
- CAPACITY 350+ Horsepower

CHANGEMENT DOUX QRS DE PERFORMANCE STRAIGHTLINE

Great addition to all the Ski-doo QRS or Arctic Cat 2012-2020 Secondarys. The bearing prevents binding of secondary spring. This helps improve smoother upshifting and greatly improves backshifting. It is a simple, yet effective addition.

VENOM CHAINS & SPROCKETS

CHAÎNES ET PIGNONS VENOM

To get optimal performance out of your machine, you need to gear it right. We offer a complete lineup of gears to fit your needs. Made of heat treated, case-hardened 8620 high-alloy steel, our CNC-machined sprockets are made in an ISO 9000 certified facility right here in the United States.

In 2016, Arctic Cat changed from Rexnord to BorgWarner HY-VO® drive chain and sprockets. Visually, this is the difference between the chains: The sprockets for Rexnord chains must be used with Rexnord mating sprockets, the same is true for BorgWarner components. Two stroke sleds with engine reverse use a standard top sprocket. Four stroke sleds use a sprocket with engagement splines. Additionally the automatic tensioner on the Arctic Cat ProCross/ProClimb chassis cannot adjust far enough for many sprocket/chain combinations.

In 2018, Arctic Cat™ changed the internal spline on the mountain sleds and the XF High Country. These sprockets are listed in Table E.

ARCTIC CAT™ B.O.S.S. TORLON® ROLLER UPGRADE
MISE À NIVEAU DES ROULEAUX ARCTIC CAT™ B.O.S.S. EN TORLON®

VENOM PRODUCTS

Venom Products High Performance Torlon® Rollers for the Arctic Cat B.O.S.S. Clutch. This is also an upgrade from the factory rollers. The combination of aromatic groups and imide linkages are responsible for the polymer's exceptional thermal stability. The amide groups impart flexibility and elongation, which results in an engineering plastic with exceptional toughness. The result of this is a more consistent tune in different conditions and loads.

QUEL QUE SOIT VOTRE STYLE,
CAMSO A LA BONNE CHENILLE

It doesn't matter if you're a recreational rider or a racer, whether you prefer groomed trails or back country exploration, whether you seek the adrenaline rush of steep terrain or the comfort of a casual cruise in the countryside. As riders, we share one thing: our passion for snow. We love it. We pray for it. We live the journey.
To get the maximum excitement out of your sled in the conditions you prefer, select the best track for the type of rider you are.

- Bare or lightly covered ice with special traction challenges

CROSS-COUNTRY / SKI DE FOND

You prefer deeper, looser snow. Racking up the miles in the back country? Check. Half on-trail, half off? Check.
- Ditch lines
- Less-used and completely ungroomed trails
- Boondocking in remote areas with no trails

MOUNTAIN / MONTAGNE

You relish any trip that involves high country open meadows, boondocking in the trees and lots of deep snow.
- Deep powder snow with a light track for maximum traction and flotation
- High-altitude terrain
- Steep slopes

UTILITY / UTILITAIRE

You're working in the snow. You have a job to do in demanding and unpredictable conditions.
- Transportation of personnel and tools

50/50 AND BACKCOUNTRY RIDERS

Boost your crossover or trail sled

50/50 riders rack up the trail miles, but give them half a chance and they're off the trail, playing in an open, untracked meadow or riding a ditch line.
Backcountry riders don't need any second invitations to head out into untravelled pristine powder and deep snow.

HACKSAW

iGrip is a Canadian company, specialized in the design and manufacturing of screw studs since 2015, with over 10 years' experience in the field. The reputation of their products is renowned, because of their safety, their simple installation and our comprehensive range of long-lasting solutions suitable for any weather condition. We have several kinds of studs designed for automobiles, agricultural vehicles, heavy and light machinery, recreational vehicles, snowmobiles, forest vehicles, military vehicles, mining vehicles and bikes, as well as for safety boots.

All iGRIP studs are manufactured in hot dipped steel to maximize their durability and with a zinc heat galvanization process which acts as a shield against corrosion. All studs are equipped with a Tungsten carbide point to provide a continued and increased traction. This is possible thanks to unparalleled depth of the stud's anchoring in the ice. Easy and quick to install, especially because of the tool provided, the iGrip stud may be used without any difficulties more than one season on new or used tires. As well, the studs are easy to remove, as needed.

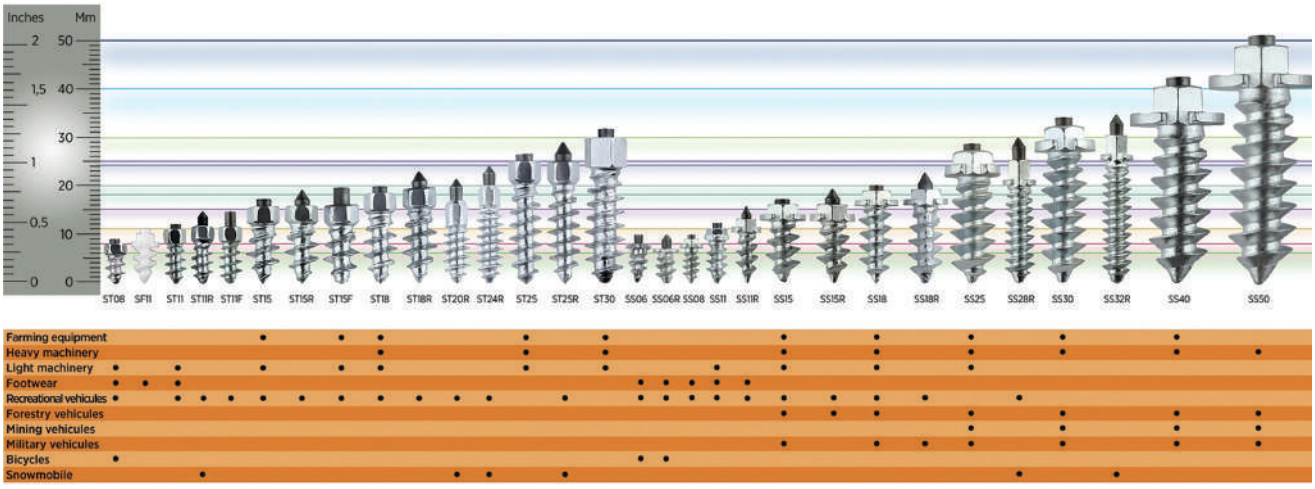
STUD TYPES

For many years iGRIP has offered **ST-type (standard thread) studs**. However, in order to improve the product range, iGRIP has added two stud types to the stock, thus answering to the customers' needs.

The **SS (shoulder studs)** models were designed for heavy machinery and all kinds of vehicles used in extreme conditions and environments. As well, there are **SF (spark free) model studs**, which, as the name suggests, do not create sparks when in contact with the ground.

ENHANCED SAFETY SÉCURITÉ AMÉLIORÉE



Footwear, tires and tracks will immediately have an increased level of safety after the installation of iGRIP studs, which allows better control of the vehicle when used in slippery terrains.

SUITED TO YOUR REALITY ADAPTÉ À VOTRE RÉALITÉ

It is possible to choose and vary the number of studs inserted in the tire or in the footwear soles in order to respond to specific needs. Moreover, the variable depths and lengths guarantee an optimal grip of the tires, tracks or boot soles on ice, snow, mud, slippery rocks or frozen roadways. For control, effectiveness and safety, choose among our wide selection of versatile screw studs.

CODE C I KEYWORD 18

STUD BOY® products provide the safety and performance that gets the power to the ground while maintaining confidence in snowmobile control. Traction control products puts ease in knowing your snowmobile will respond the way you need it to, and STUD BOY® stud & wearbar products will provide this confidence!

SHAPER BAR

The "Shaper"™ Bar takes the wearbar design and performance to a new level! This bar offers a unique shape that provides much better turning than conventional bars and offers a 20% weight savings too! The concave side profile on the "Shaper"™ Bar grabs and holds snow rather than allowing snow to slip by like other. While the shape of this bar improves the turning radius of your sled on the trail, the large 60° carbide provides great control and wear on hard surfaces. Zinc plated to resist corrosion and eliminate paint in threads.

ENDURO BAR

The "Enduro Bar" is our newest runner designed to be big and bold on the trail. Offering a rectangular shape .437" wide x .650" deep providing great handling and durability with 60° degree cutting carbide. This runner is easy on the arms while still maintaining very aggressive turning with tight radius corners being no problem. E-coated in a corrosion resistant black finish.

STEERING STEM CLAMPS
COLLIERS DE GUIDON

CODE B | KEYWORD 16

- These Billet Steering Blocks replace the wear prone plastic OEM Blocks on many snowmobile Steering Shafts.
- Machined from 6061 T6 Aluminum, and Bronze Alloy Bushings, these blocks will last longer than the sled.
- Since these are precision machined for perfect fit, bent or warped steering posts may cause binding and trouble installing.
- Never have to lube the Steering Shaft Bushings again.

Len Performance reservoir snowmobile shocks are designed and built with the focus on the rider. Our shocks are ready to mount out of the box with preload adjustability and feature 5 click compression and rebound adjustments for front ski shocks and 5 click compression adjustment on all track shocks. These range of adjustments help the rider easily fine tune their suspension to whatever their needs may be. Our aluminum reservoirs feature a finned cooling system which helps prevent performance robing temperatures and increases longevity and performance under the harshest conditions. We use only high-grade materials including forged aluminum head and anodize all aluminum components for increased durability and corrosion resistance. With our focus on rider experience we have a network of rebuilders to help keep you on the trail.

Eyelet / Bushing - Forged Aluminum Head with Premium Steel and NBR bushings

Reservoir / Finned Reservoir - Finned cooling system helps decrease temperature and increases longevity and performance.

Compression & Rebound Adjuster - Len shocks come standard with a 5 stage compression adjustment. User friendly intuitive design features 5 click compression adjustments for seamless adaptation to any riders experience level in any condition. Annodized dual ring locking adjusters make it easy to adjust your preload but ensure they stay set once you have them adjusted.

Infinite Preload Adjustment - All springed shocks feature a threaded body for ultimate preload adjustability

Rebuildable / Tuneable - Value added rebuildable design increases the lifespan of our shocks and ensures performance for many years to come. Easily serviced with our expansive network of service centers

Shaft - Hardened Chromoly shaft increases overall strength and seal longevity

Spring - Springs are powdercoated to reduce corrosion, increase duarbility and ensure continued strength under the harshest of conditions

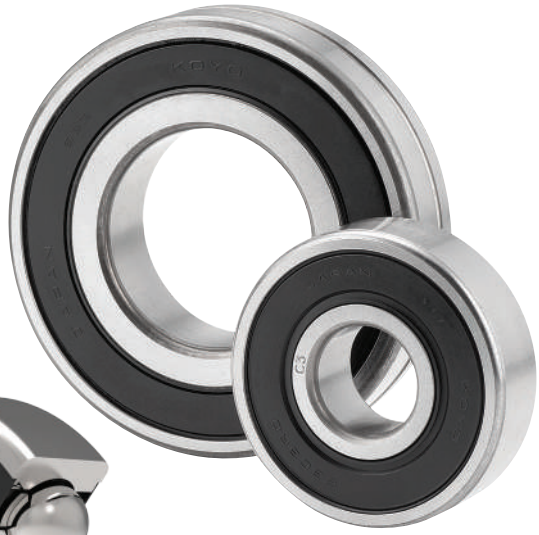
KOYO BEARINGS FOR SUSPENSION



ROULEMENTS JTEKT KOYO POUR SUSPENSION

NEW JTEKT

Jtekt Koyo Bearings are found in modern applications from eco-conscious wind power generators to aerospace to high-speed transportation. Along with a legacy in traditional industrial applications, Koyo remains a leader in advancing innovative new materials, manufacturing expertise and precision engineering capabilities ranging from extremely large bearings with outer diameters as large as seven meters to miniature bearings as small as one millimeter providing unique customer solutions.

DEEP GROOVE BALL BEARINGS

Available in a variety of sizes, and are the most popular of all rolling element bearings. This type of bearing supports radial and a certain degree of axial load in both directions.

Shielded/ Sealed Type

The shielded or sealed deep groove ball bearings simplify the sealing structure of applications and are designed for use with a rotating inner ring. Greasing will not be necessary as these bearings are pre-lubricated for life.

Types with locating snap ring

Bearings with a locating snap ring can be fit into the housing easily, as the locating snap ring facilitates axial positioning.

Extra-small ball bearings and miniature ball bearings

Available as an open type, shielded / sealed types, and the flanged type. The latter is easily positioned in the axial direction.
