GMAX™ HELMET SIZING CHART

CHARTE DE GRANDEUR POUR CASQUE GMAX™

A great deal of effort has been put into making GMAX™ Helmets-The Better Fitting North American helmet.
Please use the following information to help choose the proper size helmet.
In order for a helmet to protect properly and be the most comfortable, it must be sized to your head correctly. The best way to check sizing is to put the helmet on and see that the helmet feels snug equally all around your head. The helmet should not feel too tight or too loose at any particular point around your head. Use the following chart to find the approximate size helmet for your head. Please remember that all head shapes are slightly different and the sizing chart is to be used as a starting guide to fit the correct helmet size to your head. Measure the head circumference one inch above the eyebrows and ears, then use this chart to find your approximate size.

TECHNOLOGIES

SWEEP T.C.T. TEMP CONTROL TECH

SWEEP T.C.T. or Temp Control Tech products have dedicated ventilation zippers to give the user ventilation flexibility in differing conditions. These vents exist as side, back & chest vents but also on the inner & outer thighs of our products. The ventilation has been designed to be effective at all speeds whilst remaining snow & moisture proof.

YKK® AquaGuard PREMIUM WATERPROOF ZIPPERS

SWEEP snowmobiling products often use the most premium YKK® Vislon® AquaGuard zippers. These zippers are constructed with polyurethane lamination to provide excellent water resistance in any condition. YKK® AquaGuard zippers are reliable and easy to use.

THERMOLINE THERMAL INSULATION

THERMOLINE Thermal Insulation material is an extremely efficient thermal insulator made out of polyester fiber blend. Quality thermal insulation is key for your riding comfort, and safety. THERMOLINE
THERMAL INSULATION

The acronym stands for Sweep Integrated Floating Tech, and it lives up to its name by providing a lifeline in icy situations. This innovative technology enables snowmobile riders to remain more buoyant on water, drastically reducing the risks associated with accidents on frozen lakes, river, or other bodies of water.

S.I.F.T utilizes a sophisticated design that combines buoyancy and water displacement. This technology seamlessly intergrates into the inner lining of Sweep Snowmobile products, providing an additional layer of safety without compromising the performance of the garment.

REAL-WORLD TESTING™ COLD COMFORT TESTING
TESTS DE CONFORT AU FROID REAL-WORLD™

One of Baffin's main points of difference is our real-world testing and the stories that are ready to be told. Our Goal is to use the Real-World Testing™ (RWT™) level evolution as a vehicle to bridging the gap between product and application. RWT™ acts as the catalyst for sharing these stories, experienced internally and by customers alike.

RWT™ is a system which helps to recommend comfort levels associated with Baffin footwear. Each level has been determined by extensive use of Baffin product in real-world application on expeditions and job sites around the world. Alongside our ambassadors and end-users, we test all product ourselves by putting on our footwear and heading into the elements.

Each rating is associated with a suggested level of activity for achieving cold-comfort.

PARE-CHOCS ARRIÈRE ESCAMOTABLES HIDE "N" GO

An Industry First, the Hide n Go (HNG) rear bumper seamlessly integrates a hidden storage compartment for our optional tool/ Emergency kit. POLARIS PRO TAPER RISER KIT
KIT REHAUSSEUR DE GUIDON POLARIS PRO TAPER

Raising your ProTaper bars on a Polaris sled used to be a challenge – until now. These kits includes a riser block and replacement bolts which will work with the one piece top clamp.
NOTE: The maximum height you can raise your bars without having to extend your cables will change depending on which height ProTaper bars you have. Verify cable free-play length before purchasing riser. We also offer Extended Length Brake Lines and Throttle Extensions.

NON-PIVOT RISER BLOCKS
BLOCS REHAUSSEURS NON PIVOTANTS

Non-Pivot Risers install between your handlebar clamps and your flat top steering post. They are the easiest, least expensive way to raise your bars, but while they will raise your bars, they will also push them back a little depending on the angle of your steering post. Made from extruded 6061-T6 Aluminum each block comes complete with the necessary longer mounting bolts. Most snowmobiles will accept up to a 3" Riser Block without any cable modifications. If you need to lengthen your throttle cable or brake line you can use our Throttle Cable Extension Kit or Extended Length Brake Lines

INSTALLATION INSTRUCTIONS:

STEP 1 – Remove grips. If you have rubber grips, heat them until they become flexible. Break the mastic by inserting a Phillips screw-driver between grip and handlebar. Then pry grip straight off. Do not attempt to twist off grip.

STEP 2 – Remove all residue (glue, rubber, etc..), from area covered by grip on handlebar. Clean properly using either fine sandpaper or gasoline to obtain a residue free surface, ready to receive the heating element.

STEP 3 – Remove white contact protector from heating element. Encircle cleaned area with heating element, replace rubber grip on each side Attach wires along control wire to pass underneath the hood.

STEP 4 – Drill a 1/2" diameter hole in dashboard for the installation of the HI-OFF-LO switch.

STEP 5 – Take the wire from the heating element which is not connected to the switch and attach it to a suitable ground.

a) Electric Start Models: Take a length of 18 gauge stranded wire and connect it to the end of the single wire which extends from the "Y" junction and connect it to the accessory lug on the rear of the snowmobile ignition switch.

b) Manual Start Models: The wire mentioned in 5a) must be connected to magneto (yellow wire) +

STEP 6 – Choose the switch position for the desired function:

1) Up position for high heat

2) Centre off:

3) Down position for low heat.

NOTE: The lead on which the resistor is installed should be connected to the terminal which is located in front of the slot on the threaded portion of the switch in order to match the HI-OFF-LO switch.

SENTINEL HANDGUARD MOUNT KIT NOT INCLUDED
GARDE-MAIN SENTINEL - KIT NON INCLUS

PowerMadd is excited to introduce our latest handguard offering! The Sentinel Handguard is designed to be the most stylish, durable and functional handguard to date. The Sentinel guard is larger compared to the Star Series which in turn gives you more protection. The mounting brackets are 6061 Aluminum, while the guard itself is made of two different types of plastic—a stiff two piece spine for durability, and a softer colored body for flexibility.

The Sentinel protects your hands from flying debris, rocks, bushes, branches, and mud. Plus it keeps your hands warmer by blocking the wind in cold weather. In the summer, simply snap out the removable vent cover to let air flow through. The Sentinel Handguard will work with: Sentinel Armor, Gauntlet, Flare, Hand Wrap, Mirror and Large Mirror.

PISTON INSTALLATION INSTRUCTIONS
INSTRUCTIONS D'INSTALLATION DES PISTONS

PISTON ASSEMBLIES
ENSEMBLES DE PISTONS

Comes complete with piston, rings, pin and circlips. Piston rings are keystone type and only install one way. If the ring will not install properly check to make sure that the chamfered edge is to the top of the piston.
The arrow on the top of the piston goes to the exhaust, except Polaris, arrow is on the mag side. The arrow is to verify piston pin location. Always check piston pin location (Most pistons have locating pins to the intake). Only install the new piston assembly after determining the problem with the motor. Thoroughly clean all parts after disassembly. Inspect all disassembled parts for defects and proper clearance.
Only use new gaskets when reassembling the motor and check top end bearing. Refer to manufacturer specifications for ring end gap and piston clearance. BREAK in the MOTOR.

Engine Modifications

NO WARRANTY will be allowed on pistons used in modified motors of any sort, I.E. Pipes, porting, carburetion changes, air box modifications, etc.
Damaged pistons MUST be returned for inspection.

WE KNOW PISTONS

NOUS AVONS BESOIN DE PISTONS

T-MOLY SERIES PISTON KITS

Includes: 1 Piston, 1 Ring set, 1 Wrist Pin and 1 Circlip Set

MACHINED SMOOTH HEADS

A machined smooth piston crown reflects combustion heat while reducing carbon buildup and protecting the top of the piston. Tests have shown that a machined smooth head can increase HP and fuel economy by up to 6%

HARD ANODIZED CROWNS

Pistons that are not anodized have a hardness of HRB 60, and pistons that are anodized have a hardness of HRB 105. This makes our pistons 75% stronger than non-anodized pistons.

- Increased heat resistance
- Minimized Piston expansion & contraction
- Reduced coefficients of friction

MOS2 (TEFLON-MOLYBDENUM COATING)

MOS2 is composed of sub-micron sized particles of solid lubricant and resin blends of solvents. Our coating is rolled on, so it provides 10 times the bond strength of spray on coatings.

- Draws heat through piston walls and skirt
- Reduces heat and friction, for added power and longevity
- Helps control cold seizures and increases durability

HYPEREUTECTIC CAST

A hypereutectic piston has increased silicon content. The end result is a piston that has an increased hardness, is more resistant to wear, and has an increased ability to withstand higher cylinder temperatures, pressure and detonation.

- Reduces expansion from heat
- Makes the piston more durable and resistant to wear
- Allows tighter piston clearance

OEM STYLE PISTON KITS

Includes: 1 piston, 1 ring set, 1 wrist pin and 1 circlip set

- Engineered to provide the best possible path for combustion chamber heat transfer to the cylinder walls
- All of our pistons, rings, pins and circlips are manufactured to OEM specifications
- All individual components are interchangeable with OEM parts
- Piston weight is comparable to OEM

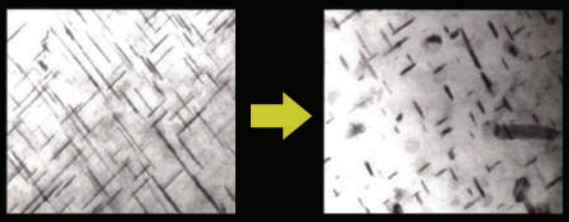
SPX QUANTUM SERIES PISTONS

HIGH PERFORMANCE SNOWMOBILE PISTONS



PISTONS SPX POUR MOTONEIGE

We are proud to bring you the next step in the evolution of performance powersports pistons. Our newest line is made from a space-age aluminum alloy which maintains its high tensile strength up to 700°F (380°C), 50% higher than a conventional cast piston. This high temperature resistance significantly improves fatigue strength and impact toughness, which means we will keep you riding longer and harder than the competition.

CONVENTIONAL CAST PISTONS

QUANTUM SERIES CAST PISTONS

The images above show two cast aluminum pistons that have been magnified to 1.000 nanometers. They were both soaked for 100 hours at 600°F (316°C) to simulate operating conditions.

It is easy to see that the conventional aluminum alloy's particles coarsen significantly, this weakening of the material's bonds will lead to a sharp drop in piston strength. While the particles of our new aluminum alloy have only coarsened slightly, showing that they are still able to maintain a higher strength for longer periods.

This new alloy, combined with our already existing techniques of anodizing the crowns, machine smoothed heads and MOS2 coated skirts for smoother startups and break-ins, meets the demands for today's high performance engines.

SPX is proud to present the QUANTUM SERIES PISTON. The evolutionary piston is made from a space-age aluminum alloy which maintains it's high tensile strength up to 700°F (300°C). This is 50% higher than a conventional cast piston. This high resistance to temperatures significantly improves fatigue, strength and impact toughness. The aluminum alloy combined with the existing anodized crown, machine smoothed heads and MOS2 coated skirts meets the demand for today's high performance engines.

GGB EXHAUST

Mountain Can

SILENCIEUX POUR MOTONEIGE

These mufflers are a super lightweight, straight through flow design and have an aggressive exhaust note when your on the throttle. Systems fit securely in the stock location using stock mounts, no modifications required. Most Mountain cans weigh between 4-5.5 lbs and are designed for use in unpopulated areas. ***These mufflers are loud, please use accordingly.***

Trail Can

SILENCIEUX POUR SENTIER

Lightweight mufflers with a trail tuned, deep muscle sound. These mufflers are not straight through and will provide lower sound levels than our Mountain mufflers. Systems fit securely in the stock location using stock mounts, no modifications required. Most Trail cans weigh between 6-7.5 lbs and in most cases meet J2567 sound regulation of 88 dB, 4 meters away.

Quiet Can

RÉSERVOIR SILENCIEUX

The GGB Quiet can is designed for riders wanting to enhance the stock sound and save weight at the same time. At idle the Quiet Can delivers a deeper slightly louder exhaust note, transitioning to close to stock sound levels through the mid range and top end to keep the peace. Most Quiet can mufflers weigh between 9-10.5 lbs and will easily pass J2567 sound regulation of 88 dB, 4 meters away.

All GGB mufflers are flow bench and dyno tested to provide performance levels as good as or better than stock.

2 Stroke Performance

PERFORMANCE 2 TEMPS

GGB 2 stroke mufflers are flow benched for back pressure against the stock muffler and then dyno tested to maintain or make additional power. Performance levels with the GGB muffler will be as good as or better than stock. Fuel and clutching mods are not necessary prior to installation.

4 Stroke Performance

PERFORMANCE 4 TEMPS

GGB 4 stroke mufflers provide an increase in exhaust flow and will provide moderate power gains over the stock muffler. Fuel or clutching mods are not necessary prior to installation. Most GGB 4 stroke Mountain mufflers ship with a "reducer" inside the outlet tube. This reducer can be removed for additional exhaust flow when adding fuel controllers or when engine mods are made for increased power.

MAXIMUM POWER ACHIEVED THROUGH AIR INTAKE, ACCELERATION & DISTRIBUTION
PUISSANCE MAXIMALE OBTENUE GRÂCE À L'ADMISSION D'AIR, À L'ACCÉLÉRATION ET À LA DISTRIBUTION

Our key breakthrough factors make Boyesen vs the most advanced air intake system you can add to your sled! The Gulp Factor -Your engine is a glutton for air. It will take over 200 "gulps" per second, at velocities over 500 MPG - if your intake valve will let it. The Rage Cage's seamless, one-piece, precision casting and continuous aeroform surfaces ensure maximum flow velocities and instant, explosive movement of air particles the moment you open the throttle. Result: an intake valve the size of your fist delivers air with the power of a tornado.

RAGE CAGE KITS
ENSEMBLE DE VALVE À CLAPET D'ADMISSION

Designed to optimize airflow intake and fuel delivery,instant acceleration and unequaled increases in horsepower and torque through the entire RPM range.

BOYESEN SNOWMOBILE POWER REEDS
VALVE BOYESEN POUR MOTONEIGE

REVOLUTIONARY PERFORMANCE
PERFORMANCE RÉVOLUTIONNAIRE

Boyesen's patented dual-stage design incorporates a specially shaped top reed and a ported bottom reed. The top reed is lightweight and resilient for crisp throttle response at partial throttle or low RPMs. The stiffer, bottom reed is ported to provide maximum flow and horsepower at higher RPMs. More valves equals more power by creating: More Air Flow. The dual-stage design allows you to replace your stock reed stop with a Rev-Plate which permits the reeds to open freely and function efficiently. More Air Velocity. The multi-port feature of the bottom reed creates more channels for the charge, delivering increased velocity to the intake ports. More Overall Power. Dual-stage reeds work in unison to perform efficiently throughout the entire powerband. The difference in stiffness between the top reed and the bottom reed allow the reeds to respond quickly and accurately to changes in engine pressure. This translates into quicker acceleration, crisper throttle response and increased horsepower throughout the powerband.

THE BENEFITS OF BOYESEN POWER REEDS
