PRO 2.0 GLACIER PLOW MOUNT ADAPTER

ADAPTATEUR DE MONTAGE DE CHASSE-NEIGE GLACIER PRO 2.0

2.0 Glacier Adapter - SQ Tubes #**33-08409**
KFI Glacier Adapters are designed for Full-Size Polaris Rangers with the Glacier Bumper.
Mid-Size machines (unless modified) are too low to use the Glacier Adapter properly.
If this mount fits on your full size machine but you have (or are going to install) tracks, larger tires, or a lift kit, we would recommend using the alternate mount so that it will be compatible with our push tube leveling kits.
Improper geometry can lead to a bad blade angle and/or force being applied incorrectly. The optimal height of the Glacier mounting location should be 14" from the ground. See image below for reference.
If you have the original Round Style Push Tubes, the Glacier Adapter you would need is located here, #**33-48413**.

NGK SPARK PLUGS
BOUGIES D'ALLUMAGE NGK

SERIOUS POWER FOR ALL TYPES OF ENGINES
UNE PUISSANCE SÉRIEUSE POUR TOUS TYPES DE MOTEURS

NGK Spark Plugs are available in many heat ratings for each application. Each rating has a wide range of operating temperature. Selection on the proper heat rating is determined by the condition of the engine and the way it is driven. Wide heat range is crucial for optimum engine performance. The plug must operate at a temperature hot enough to burn off deposits which cause fouling and misfiring; yet be cool enough to prevent pre-ignition. NGK's heat range is much wider than ordinary plugs. In fact, a single NGK Spark plug type often covers the range of two or three conventional plugs. At low speeds or in stop-and-go driving, NGK's will resist build-up and avoid fouling. The same NGK plugs will also resist pre-ignition problems when severe heat is generated by high speed or heavy load condition. One secret to NGK's wider heat range rating is advanced design, materials, and construction. With the introduction of the copper core in 1958, NGK dramatically changed spark plug technology. Copper's heat conductivity and electrical properties are superior to conventional plugs. Heat is quickly dissipated from the centre electrode and insulator to avoid plug damaging hot spots and to prolong plug life. NGK also engineered a longer insulator nose to minimize carbon build-up and reduce cold operation misfiring. Superior construction. Longer life. Optimum performance. All are standard with NGK, the brand specified as the source for serious power on more new automotive, motorcycle, snowmobile, marine and small engines than any other spark plug in the world.

NGK IRIDIUM IX SPARK PLUGS

CODE B I KEYWORD 13

BOUGIES D'ALLUMAGE NGK IRIDIUM IX

The NGK iridium IX represents the ultimate in spark plug technology and performance. The superior properties of Iridium allow for an ultra fine center electrode. This 0.6 mm center ignitability and durability. The results are outstanding acceleration, high fuel efficiency and longer spark plug life.

- 0.6 mm Iridium center electrode tip —Designed to just the right size. It's not too thin, ensuring high durability and spark plug life. Not too thick minimizing the voltage requirement for a consistent stable spark
- Over 90% iridium alloy —The perfect blend to take advantage of the extremely high melting point and superior strength of iridium under extreme high performance conditions
- Trivalent metal plating —Superior anti-corrosion and anti-seizing properties at high temperatures

INTELLIGENT FUSES
FUSIBLES INTELLIGENTS

The MINI® Fuse is quickly becoming the new standard for vehicle circuit protection throughout the world. Its miniature design, patented by Littelfuse, meets the need for more circuits to be protected while utilizing less space, and its ability to cope with high temperatures in adverse environments makes the MINI® Fuse the recommended choice for protection. Smart Glow fuses are innovative automotive style fuses (ATO, Mini, Maxi and glass tube) that feature an indicator light that glows when the fuse is blown, saving time to troubleshoot an open circuit.

- Intelligent fuses, plug - in
- Length 11.0 X Width 16.5 X Height 3.8mm
- Indicating device lights up when the fuse is blown

TEMPERATURE SENSORS
CAPTEURS DE TEMPÉRATURE

See Pages 1105-1108 for Applications

Temperature Sensors work with the machines computer system to measure/monitor engine temperature including the lube/oil and coolant in order to control radiators, cooling fans, and thermostats. If the sensor fails, a warning light will usually show up on the machine. This could lead to overheating, or improper running conditions if not replaced.

PREPARATION BEFORE PUTTING INTO SERVICE

This battery is dry charged; which means that it could be put into service immediately after filling with acid, but we caution to ensure maximum life and performance from the battery it should be trickle charged for 4-10 hours to freshen the battery.

Failure by the retail selling entity or the purchasing user to undertake this protective measure will render the battery warranty null and void in the event of any subsequent alleged damage to the electrical components of the vehicle to which the battery is being fitted.

(1) Just before filling, remove the rubber cap and connect the exhaust tube with the exhaust opening.

(2) Remove filling plugs and fill cells to UPPER LEVEL indicating line with electrolyte (dilute sulfuric acid) having a specific gravity as follows;
Cold or Temperate Climate 1.260-1.280 at 20° C (68° F) Tropical Climate 1.220-1.240 at 20° C (60° F)
The electrolyte temperature when filling must not be lower than 15° C (59° F) nor higher than 30° C (86° F)

(3) Allow battery to stand for 1 hour after filling before placing on charge. If level of electrolyte has dropped, add more electrolyte until. UPPER LEVEL indicator line.

(4) Place on charge at the proper rate as given in TABLE. Charge until all cells are gassing freely, and the voltage and specific gravity are constant over three successive readings taken at 30 minute intervals. The total charging time will be about 10 hours.

(5) After completion of charge, adjust the electrolyte level to UPPER LEVEL indicator line.

(6) Replace filling plugs, neutralize and wash off any electrolyte which has spilled on the battery. Battery is now ready for service.

INSTRUCTIONS FOR DAILY MAINTENANCE

(1) Check periodically.

(2) Add distilled water regularly. The level of electrolyte must always be kept above the LOWER LEVEL indicator line. When it is lower than this line, refill and adjust with distilled water to the UPPER LEVEL indicator line. Never use dilute sulfuric acid instead of water.

(3) Maintain battery in good charged condition. If head lamp becomes dim or horn sounds weak, or specific gravity is below 1.220 at 20°C (68°F) in cold or temperate climate or 1.90 at 20°C (68°F) in tropical climate it means insufficiently charged battery, so remove battery as given in TABLE, until cells are gassing freely and cell voltage and specific gravity remain constant.

(4) Keep battery clean and dry. Periodically clean and dry outside of battery. Special attention should be given to ensure that the terminals and connections are kept clean, dry, and free from corrosion.

CAUTION DURING OFF-SERVICE

Battery should be charged once a month when not in service.

SPX BATTERY WARRANTY

All SPX batteries are warranted for 1 year providing battery has been well maintained and serviced as per manual. This warranty covers replacement of the battery only, any other costs incurred are not covered.

IN WHICH CASE A DRL DECODER WILL NOT BE THE SOLUTION FOR YOUR PROBLEM

In some American vehicles (Cherokee, 300, Charger) and some Mercedes that have a greater sensitivity to the variances of the bulb charge than the majority of manufacturers. If the original bulb has 55w and your ODX LED bulb has 30w, a 25w loss is perceived by the computer, which will turn on a burnt bulb signal on the dashboard. In some cases, such as the American models, the light circuit may shut down after a few days during an automatic test. Despite the fact that the Intelligent ODX decoder adds 5w to the circuit for a total of 35w and works in most cases, the vehicles listed above are more sensitive because there is still too much of a difference. In this very specific case, you will have to use the relays with capacitor with the Add-a-circuit option and our 55w resistor sets from ODX.

PARE-BRISE SNO-STUFF

Diversity is something we have come to expect from the Powersports industry. Colors, shapes, sizes –we want it all. Well good news, our quality line of Sno-Stuff windshields does not disappoint. High, low, med, clear, smoke, coloured graphics, no graphics, custom flared, or OEM replacement –the choice is yours. In our case, looks and quality go hand in hand. All our windshields are made from super strong, crystal clear material and are produced under high standards for quality assurance. Our standard windshields are, in most cases, exact OEM replicas. For those of you who want to make a statement, check out our Custom / Flared sections for hot new graphics and styling. Either way diversity, choice, and quality are the name of the game.

Remember when ordering windshields that the retainers, O-rings, and darts need to be purchased separately.

MEASURING YOUR WINDSHIELD Measure from the top of the dash to the tip of the windshield. Subtract one inch for the tabs.

ARCTIC CAT™

Designed with the stock look in mind, our Standard replacement offers the same graphics, shape, and height profiles as the OEM windshield that came with your sled. In most cases, we also offer additional height and color choices that you cannot get from your sled manufacturer yet remain true to the STOCK look, while adding a little extra comfort and style.

SKI-DOO™

Designed with the stock look in mind, our Standard replacement offers the same graphics, shape, and height profiles as the OEM windshield that came with your sled. In most cases, we also offer additional height and color choices that you cannot get from your sled manufacturer yet remain true to the STOCK look, while adding a little extra comfort and style.

MR. FUNNEL FUEL FILTER FUNNEL - YOUR TOOL FOR PURE FUEL
ENTONNOIR FILTRE À ESSENCE MR. FUNNEL - VOTRE OUTIL POUR UN CARBURANT PUR

PROTECT YOUR ENGINE
PROTÉGEZ VOTRE MOTEUR

Dirt and water are practically unavoidable in stored fuel, causing microbial growth, corrosive acids, electrolysis and rust. These contaminants can plug filters, corrode components, decrease efficient combustion and cause engine shutdown or system failure. You can combat these problems by refueling with the fuel filter funnel. Protect your engine by using this innovative product every time you transfer fuel to your tank.

UNIQUE FILTER TECHNOLOGY
TECHNOLOGIE DE FILTRATION UNIQUE

The Fuel Filter Funnel is a heavy-duty, anti-static, and fast flow funnel with built-in filter technology. When fuel is poured through the Fuel Filter Funnel, water and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for proper disposal. The Fuel Filter Funnel will filter gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas.

ROVER360 SNOWMOBILE CASTERS
ROUE POUR MOTONEIGE ROVER360

Rover360 Snowmobile Casters put a whole new spin on the traditional casters. Rover360 changes how your skis interact with the dolly and provides an easier and more efficient way to move your snowmobiles. Rover360 increases surface contact by supporting the ski, not engaging the carbide. The center channel suspends keels up to 2.5" deep, allowing your carbide to float, and the skis are gripped with large, textured rubber pads. These dollies will revolutionize the way you move around your shop or garage.

- 3-inch casters for effortless mobility
- Center channel suspends keels up to 2.5" deep
- Ski pads increase surface contact and grip on skis
- Track dolly features provide better track engagement
- Adjustable rubber straps for additional ski security

ACTIVE CORROSION SOLUTIONS
SOLUTIONS ACTIVES CONTRE LA CORROSION

ACF-50 ANTI CORROSION FORMULA

Protects • Penetrates • Lubricates / Protège • Pénètre • Lubrifie

ACF-50 chemically treats metal using advanced polar bonding technology. It forms a "hydrophobic" film as it removes moisture from the metal surface. ACF-50 contains no water and is approved for electrical switches and connectors. ACF-50 has a strong capillary action so will creep into all the areas that moisture can; actively pushing out moisture and replacing it with protection. Where corrosion is already evident, ACF-50 will help inhibit further progress by insulating and electrically 'switching off' the corrosion cell.
