HELMET SIZING CHART / TABLEAU DES TAILLES DE CASQUE

A great deal of effort has been put into making GMAX Helmets-The Better Fitting North American helmet.

Please use the following information to help choose the proper size helmet.

In order for a helmet to protect properly and be the most comfortable, it must be sized to your head correctly. The best way to check sizing is to put the helmet on and see that the helmet feels snug equally all around your head. The helmet should not feel too tight or too loose at any particular point around your head. Use the following chart to find the approximate size helmet for your head. Please remember that all head shapes are slightly different and the sizing chart is to be used as a starting guide to fit the correct helmet size to your head. Measure the head circumference one inch above the eyebrows and ears, then use this chart to find your approximate size.

HANDGUARDS / PROTÈGE-MAINS

SENTINEL
HANDGUARD - MOUNT KIT NOT INCLUDED /
PROTÈGE-MAINS - KIT MONTURE NON-INCLUS

PowerMadd is excited to introduce our latest handguard offering! The Sentinel Handguard is designed to be the most stylish, durable and functional handguard to date. The Sentinel guard is larger compared to the Star Series which in turn gives you more protection. The mounting brackets are 6061 Aluminum, while the guard itself is made of two different types of plastic—a stiff two piece spine for durability, and a softer colored body for flexibility.

The Sentinel protects your hands from flying debris, rocks, bushes, branches, and mud. Plus it keeps your hands warmer by blocking the wind in cold weather. In the summer, simply snap out the removable vent cover to let air flow through. The Sentinel Handguard will work with: Sentinel Armor, Gauntlet, Flare, Hand Wrap, Mirror and Large Mirror.

STEP 3 – Remove white contact protector from heating element. Encircle cleaned area with heating element, replace rubber grip on each side Attach wires along control wire to pass underneath the hood.

STEP 4 – Drill a 1/2" diameter hole in dashboard for the installation of the HI-OFF-LO switch.

STEP 5 – Take the wire from the heating element which is not connected to the switch and attach it to a suitable ground.
a) Electric Start Models: Take a length of 18 gauge stranded wire and connect it to the end of the single wire which extends from the "Y" junction and connect it to the accessory lug on the rear of the snowmobile ignition switch.
b) Manual Start Models: The wire mentioned in 5a) must be connected to magneto (yellow wire) +

STEP 6 – Choose the switch position for the desired function:

ATV FRONT BUMPERS / PARE-CHOCS AVANT POUR VTT

QUAD LOGIC

This New Sportsman bumper for the 450/570 chassis. Not only does it look incredible but it is crazy strong as well. In our testing we have bashed rocks, stumps and trees with this bumper and it didn't phase it a bit! Strong 4 point mounting. The aggressive design matches the lines of the front end and protects the plastic, headlights, and radiator. The front Baja bar adds a nice touch without being too large. If you have a winch installed this bumper even incorporates a new Fairlead mount to get the winch hook out in front of the bumper. Installation is simple and we include the mounting hardware and instructions.
Black powder coated finish will look great for years.

ATV REAR GRAB BAR / BARRE DE POIGNÉE ARRIÈRE

QUAD LOGIC

The original intention in designing this bumper was to help move the ATV around. Sometimes you just need to swing the machine over a few feet and there is just nothing to grab onto. Sturdy steel construction is ergonomically placed so you can move the machine without throwing out your back. Large 1.5' diameter tubing is great to hold onto and also look great on the machine. Thick steel mounting brackets easily bolt to the open holes in the back of the frame. The spacing still allows full access to opening your storage trunk (on certain models) as well. Another problem this bumper solves is the lack of tie down points. The plastic racks offer very little points for tie downs and they flex terribly. We added a large tie down slot in each mounting bracket to give you extra options when attaching your gear All mounting hardware and instructions are included.
Black powder coated finish will look great for years.

ICOS IN CAB ON SEAT GUN HOLDER /
SUPPORT À ARMES DANS LA CABINE SUR LE SIÈGE ICOS

The ICOS (In Cab On Seat) Gun Holder requires no tools, installs in seconds, and utilizes the vehicle's existing seat belt to mount within the UTV. It offers fantastic muzzle control, keeping the gun barrels pointed safely at the floor of the vehicle. - Installs in seconds without tools! Just click in using vehicle seat belt and go!
- Holds up to 2 guns securely surrounded in soft cushioned channels that won't mar firearm

GLACIER PLOW MOUNT ADAPTER
ADAPTATEUR DE MONTAGE POUR CHASSE-NEIGE GLACIER

2.0 Glacier Adapter - SQ Tubes #**33-08409**

KFI Glacier Adapters are designed for Full-Size Polaris Rangers with the Glacier Bumper. Mid-Size machines (unless modified) are too low to use the Glacier Adapter properly. If this mount fits on your full size machine but you have (or are going to install) tracks, larger tires, or a lift kit, we would recommend using the alternate mount so that it will be compatible with our push tube leveling kits. Improper geometry can lead to a bad blade angle and/or force being applied incorrectly. The optimal height of the Glacier mounting location should be 14" from the ground. See image below for reference. If you have the original Round Style Push Tubes, the Glacier Adapter you would need is located here, #**33-48413**.

CODE C | KEYWORD 4

- Forged from a single blank, grain flow is improved to enhance the mechanical characteristics of the valve without having to resort to welding
- Compatible with OEM components
- Induction hardened valve stem tip
- Precision machined valve head and seat surfaces

STEEL / ACIER

- Special PVD, CVD processes leave a (Black Nitride Coating) BrN coating that provides high micro-hardness and low friction surfaces for reduced heat generation and carbon build-up

TITANIUM / TITANE

- Special PVD, CVD processes leave a (Chromium Nitride Coating) CrN coating that provides high micro-hardness and low friction surfaces for reduced heat generation and carbon build-up and the titanium is coated to an ultra-smooth surface while reaching hardness levels 5x that of high speed steel

While still continuing with a proprietary alloy, we have found that these pistons outperform many of their Aluminum 4032 competitors in the market. Comparing the two side by side, they both have very similar Elongation (%), Yield strength (kg/mm2), and Tensile Strength (Kg/mm2), But Namura's Forged pistons hold an expansion rate that is actually lower than 4032 forged aluminum. Giving you longer lasting build tolerances than our competitors.

Namura Forged pistons will also be coming with the signature features that you have come to expect from Namura Technologies; CNC machined smooth heads, MOS2 rolled-on coated skirts, and hard anodized crowns. In addition to these, we have also added strategic bridging for improved pin support while still keeping weight at a minimum.

Field tested and Dyno Proven, Namura Forged pistons surpass standard forged pistons in durability and performance

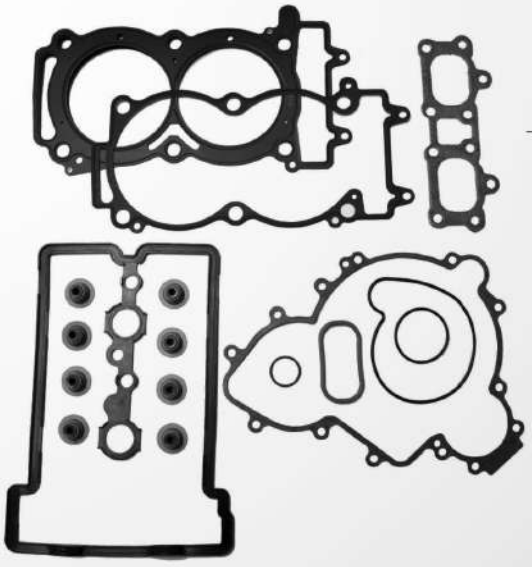
RINGS

COMPRESSION RINGS

Composed of either a highly ductile cast iron or stainless steel alloy; both materials possess excellent wear resistance and provide a gastight seal. Chrome, phosphate and nitride coatings are also used to meet the demands of the application.

OIL RINGS

Oil rings consist of three separate components. Two scraper rails constructed from highly ductile cast iron or a stainless steel alloy and also have a chrome, nitride, or phosphate coating. The single expansion ring is manufactured from stainless steel.



WRIST PIN BEARINGS

Our bearings are manufactured from *SCM415* steel and treated using a process called carbonnitriding; this enhances the fatigue strength and heat dissipating capacity of the cage. We also felt we needed to fancy them up so we coated them with silver (yes, real silver) to help prevent lubrication failure during operation.

TOP END REPAIR KITS

These include everything you need to get you operational again; they come with pistons, a top end gasket kit and bearings where needed.

GASKET KITS

Produced using performance materials to increase durability and provide greater reliability, our gasket kits are offered in both top end and complete gasket kits. Clutch gaskets are available for some applications.

Pistons are Molybdenum/Teflon coated with anodized domes. Most have a machine-smooth dome; any exceptions will be noted.

Piston Kits - includes piston, rings, pin and clips.

Top End Repair Kits - includes piston (s), rings, top end gasket kit, pin(s), clips and bearings (if needed).

The advantage of choosing Namura goes beyond just their selection of cylinders. When you opt for a complete kit, you not only get a high-quality cylinder but also a carefully selected Namura piston and top-end gasket kit. This approach ensures that all the components work seamlessly together, resulting in improved power and performance for your engine.

Boyesen

The Gatekeepers of Power

Boyesen Engineering offers the most advanced intake innovations available for two-stroke engines. Our Power Reeds, Pro Series Reeds, Rad Valves and other unique products enhance performance of motorcycle, snowmobile, watercraft and outboard marine engines. At Boyesen, R&D is hands-on, tested in the field and tied to feedback from the end user. We use the latest computerized testing and manufacturing processes available in the industry. From research through production, Boyesen is committed to using creative concepts, new materials, and better designs that will keep your machine performing at peak capacity.

ATV POWER REEDS / LAMELLES DE PUISSANCE POUR VTT

THE GATEKEEPERS OF POWER / LES GARDIENS DE LA PUISSANCE

Boyesen's patented dual-stage design incorporates a specially shaped top reed and a ported bottom reed. The top reed is lightweight and resilient for crisp throttle response at partial throttle or low RPMs. The stiffer, bottom reed is ported to provide maximum flow and horsepower at higher RPMs. More valves equals more power by creating:

MORE AIR FLOW / PLUS DE FLUX D'AIR

The dual-stage design allows you to replace your stock reed stop with a Rev-Plate which permits the reeds to open freely and function efficiently.

MORE AIR VELOCITY / PLUS DE VITESSE D'AIR

The multi-port feature of the bottom reed creates more channels for the charge, delivering increased velocity to the intake ports.

MORE OVERALL POWER / PLUS DE PUISSANCE GLOBALE

Dual-stage reeds work in unison to perform efficiently throughout the entire powerband. The difference in stiffness between the top reed and the bottom reed allow the reeds to respond quickly and accurately to changes in engine pressure. This translates into quicker acceleration, crisper throttle response and increased horsepower throughout the powerband.

THE BENEFITS / LES AVANTAGES

- Quicker acceleration for that all-important holeshot.
- Crisper throttle response for fast corner exits and surer jumps.
- More horsepower throughout the powerband for guaranteed performance.
- Improved engine efficiency and fuel economy for the long distance rider.
- Longer life - Boyesen Power Reeds outlast all other aftermarket reeds.

QUALITY AND CRAFTSMANSHIP / QUALITÉ ET SAVOIR-FAIRE

Since 1972, Boyesen has maintained its position as the leader in reed induction technology by introducing dozens of breakthroughs and refinements in reed performance. The latest advances in material technology are incorporated into every reed design, allowing us to manufacture reeds that not only increase power, but are durable and dependable too.

MATERIALS / MATÉRIAUX

From beginning to end, Boyesen supervises every aspect of the manufacturing process for our reed materials. The thread count of the fiberglass or carbon fiber, the positioning of the plies, and the type of epoxies used to fabricate the reed materials are specified by Boyesen to insure reed materials of uncompromising quality. Multiple plies are then laminated in variety of configurations to obtain reed materials of varying functionality. More than fifty individual types of reed material are fabricated for a variety of applications.

All reed materials undergo a rigorous three-step quality control inspection. Each sheet of material is examined and tested for manufacturing flaws. The material is then cut into individual strips which are measured with a digital micrometer to insure proper thickness. After the reeds are stamped, they are individually hand inspected. We spare no effort in assuring our customers that only reeds of superior quality are packaged and sold.

DESIGN / CONCEPTION

Careful consideration is taken with every reed design. Variables such as engine and carburetor size, operating characteristics of the engine and computer-aided flow analysis of the reed block are used to determine the optimum configuration for each reed design. Initial design prototypes are cut on a computerized, three-axis machining center, allowing for quick and accurate designs. Further testing & analysis is then done on our SuperFlow flow benches and SuperFlow 901 and Dynojet 150 dynamometers. Finally, every design is tested in the field by a variety of industry specialists to insure that the each new design provides maximum performance &life.

GUARANTEED / GARANTI

Every Boyesen product comes with a money back guarantee. If you are not completely satisfied with a product, return it for a full refund.

V-FORCE3 REED VALVES / VALVES À CLAPETS V-FORCE3

Symmetrical Petals / Lamelles symétriques: The VForce3 now uses symmetrical reed petals. No longer will you need to be concerned with having both "inner" and "outer" reed petals.

Super Quick Petal Changes / Changements de lamelles ultra-rapides: The VForce3 incorporates the industry's first and only patented snap together reed valve design. The entire assembly is completely screw free, meaning that when reed petals need changing the job is now literally a "SNAP".

Custom Air Guides / Guides d'air personnalisés: Custom air guides specific to each individual application ensure the maximum airflow and benefits of the VForce3 reed valve system in your motorcycle or ATV.

Advanced Composite Technology / Technologie avancée des composites : The VForce3 utilizes an advanced composite technology with an all new carbon fiber lay-up and resin system. This new lay-up was designed entirely around the reed cage design of the VForce3 for superior performance and response.

Redesigned Reed Stops / Butées de clapets redessinées : A new improved reed stop design completely eliminates the need for retaining screws. This new feature now removes any possible chance of a failure.

Airfoil Technology / Technologie de profil aérodynamique : Airfoil shaped (flat on bottom/curved on top) reed tip surface increases velocity of fuel/air mixture as it passes through, creating the optimum fuel atomization.

ATV/UTV AIR FILTERS / FILTRES À AIR POUR VTT/CÔTE À CÔTE

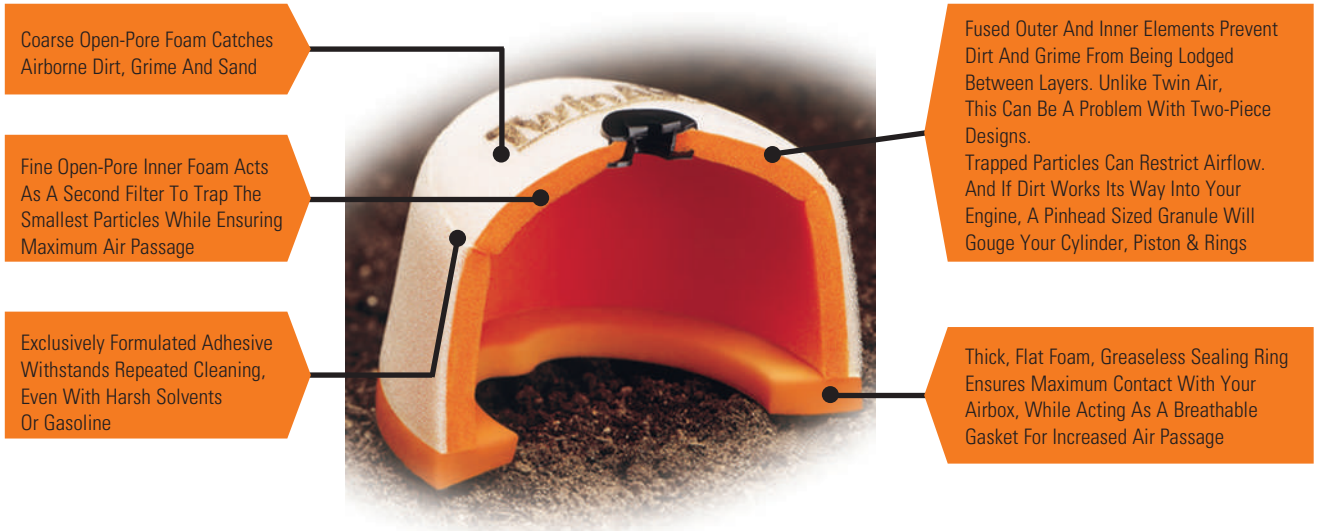
See Pages 450-457 For Applications / Voir les pages 450-457 pour les applications

Plato said, "Necessity is the Mother of Invention". Over 30 years ago, the sandy gritty soil of the Netherlands - and the resulting engine failures - gave us that necessity. The single-foam and paper filter gave riders air flow, but failed at protection. Twin Air's breakthrough, fused-dual-layer design combined performance and protection. The fused layers of open-pore foam and fine inner foam trap even the smallest particles - without restricting airflow.



In 1972, the Motocross world was given a historic boost by a revolutionary new product: a flame laminated, dual-stage foam air filter that, when soaked in a specially developed foam air filter oil, allowed free airflow into the carburetor while providing the engine maximum protection from particles of sand, grime and water. It was not only effective, but durable, washable and reusable. The new innovative product became the beginning of Twin Air.

Today, Twin Air is a renowned brand name and the company's product line is continually evolving and expanding. The technology and design of Twin Air filters and accessories have stayed ahead of the competition for half a century and are OEM-specified to more than 30 motorcycle companies worldwide.

Our commitment to a quality production program ISO 9000-2015 is evident from our growing satisfied world-wide customer base. Twin Air strives to remain a leader in the industry by continually improving its products and services. Twin Air shares the benefits of our ISO 9001 certification with our customers and take pride in our commitment to complete customer satisfaction.

Twin Air will enter its 50th anniversary year with the same commitment that has propelled the brand's global status over the last ½ century.

- Motorcycle & ATV
- 2 Stroke
- 4 Stroke (free-flowing, backfire resistant foam laminated to the inside of the filter- eliminates restrictive, stock backfire screen)
- Washable/reusable (reusing a twin air filter 40-50 times is common)
- Dual-layer foam (made to our specifications, with cells that are evenly sized and distributed)
- Greaseless sealing ring
- High quality (assembled by hand and inspected for a perfect fit)
- Packaged in a resealable bag

TWIN AIR FILTERS ARE SLIGHTLY SMALLER THAN STOCK FILTERS TO INCREASE AIR SPACE AROUND THE FILTER AND IMPROVE CIRCULATION

Don't let your stock set-up rob you of power and engine reliability. These kits eliminate leaks and provide more air for power, but the filter can still be removed in a snap for cleaning. The new generation PowerFlow kit converts the filter mounting system from a clamp on filter to a filter cage and wing bolt mounting system. This new flange system allows for the use of a TwinAir Air Box Cover for washing the air box.

TRAIL MUFFLER - ENHANCED PERFORMANCE, TUNED SOUND, LOW DB LEVELS
SILENCIEUX DE SENTIER - PERFORMANCE AMÉLIORÉE, SON AJUSTÉ, NIVEAU SONORE RÉDUIT

DAYCO

ATV

Dayco knows that ATV belts take abuse as the belt is responsible for transmitting power from the motor to the wheels. This is why Dayco has been manufacturing ATV belts for years with the rider in mind.

HP

HP™ OUTDOOR ACTIVITY BELT

Designed for use on low to mid-range all-terrain vehicles, golf carts, farm and ranch utility vehicles, the Dayco HP Outdoor Activity Belt has fast become the ATV rider's belt of choice. Manufactured from a specially formulated fiber reinforced polychloroprene and aramid cord, the Dayco HP Outdoor Activity Belt delivers superior strength, enA hanced dimensional integrity and stability for long lasting belt life in these applications.

HPX

DAYCO® HPX™ ATV BELT

From mud holes to rocky trails to hill climbs to desert treks, Dayco HPX ATV and UTV belts deliver unparalleled response. Constructed with extra strong aramid cord reinforcement and fiber-loaded polychloroprene compounding, this belt delivers the muscle and durability demanded by today's high performance engines and the high performance enthusiasts who drive them.

Tested under severe field conditions, the Dayco HPX ATV belt has been proven to run cooler and provide longer belt life than competitive belts.

XTX

DAYCO® XTX™ ATV BELT

Built for the most extreme machines, Dayco XTX ATV and UTV belts are engineered for machines powered by 800cc and above engines. Engineered with specially-formulated, high temperature polychloroprene with the highest level of aramid fiber reinforcement available, the Dayco XTX belt delivers track-churning performance for the most aggressive riders. This innovative break-through design features deeper cogs on top and rounded cogs on the bottom for ultimate flexibility and longer belt life while being a better alternative to the original equipment belt.
