VENOM TORLON® B.O.S.S. ROLLER UPGRADE / MISE À NIVEAU DES ROULEAUX VENOM

Upgrade square pucks to our round rollers on the 2016 and newer Polaris (B.O.S.S.). By replacing the square slider pucks with Venom Products High-Performance Rollers, you can reduce friction during backshifts and upshifts. This change results in a more consistent tuning across various conditions and loads. These rollers replace Polaris Part No **251-2100.**

VENOM TORLON® ROLLERS / ROULETTES EN TORLON® VENOM

Torlon® rollers are a must for high-load applications where there is a risk of roller breakage. They are ideal for situations involving heavy loads or large tires. If you have ever experienced a broken roller, upgrading to Torlon® rollers is a wise choice. Additionally, if you have problems with rollers that develop flat spots, consider our composite roller upgrade. Running for extended periods at a constant speed often leads to the flattening of rollers. Flat spotting can create issues with both upshifting and downshifting.

ONE WAY CLUTCH BEARING ASM / ENSEMBLE DE ROULEMENT D'EMBRAYAGE UNIDIRECTIONNEL

The primary bearing is what the belt runs on when idle. If you look down at the primary clutch with no belt, the center shaft is a bearing running on the center shaft. When this bearing fails, you get jerky starts, the inability to shift out of neutral into gear without grinding or continue to pull forward in gear without your foot on the throttle.

KMC CHAINS / CHAÎNES KMC

KMC O-RING CHAIN / CHAÎNE O-RING KMC

Specific design of sealed-in lubrication maintenance for bearing system in each link makes the complete chain work to its optimum wear life. For KMC O-Ring chain, superior alloy steel is adopted and heat-treated to provide best performance in strength. In addition, special formulated grease contained by O-Ring in the interface between solid bushing and hardened pin keeps giving constant interior lubrication, and extremely enhances the efficiency and effects on friction elimination during operation. Least wear results in least stretch in chain, and let prolong its service life 5-10 times than standard chain.

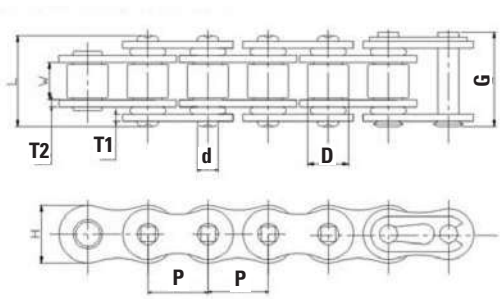
KMC MOTORCROSS CHAIN / CHAÎNE DE MOTOCROSS KMC



For Off-Road application, chain should be promoted with upgraded steel alloy for all parts, subject to going through exclusive heat-treating process as well, to remarkably reinforce its toughness against rugged terrain riding. KMC employs chromized pin and solid bushing into this chain to boost up its wear endurance and shock absorption to a great extent. Its outstanding performance does help inviting enjoyment and excitement to cyclist while going extreme.

SUNSTAR MANUFACTURER RECOMMENDATIONS / RECOMMANDATIONS DU FABRICANT SUNSTAR

- All chains should be installed by a certified mechanic, using the proper installation tools. Chain adjustment should be per the motorcycle manufacturer's owner's manual.
- Always check sprocket alignment when installing new drive components & during routine maintenance & adjustment; misaligned sprockets are detrimental in reducing the life of the entire drive system.
- It is recommended to replace your chain with the same size and type of chain that originally came on the motorcycle.
- Avoid using volatile solvents (gasoline, thinners and/or benzine) for cleaning. Consult with your local dealer before using cleaners or lubes.
- For best results and life, replace chain and sprockets together with Sunstar brand components.

COOLANT TEMPERATURE SENSORS / CAPTEURS DE TEMPÉRATURE DU LIQUIDE DE REFROIDISSEMENT

BRONCO ATV & UTV COMPONENTS

See Pages 781-782 for Applications / Voir les pages 781-782 pour les Applications

These Bronco sensors & switches monitor temperatures. If faulty, they either send signals to the machine's electrical "Brain," which can activate a warning light, shut down that part of the system, or shut down the entire engine. Usually, these are located in the cylinder block, oil cooler, or cooling system.

Switches are set up per specific temperatures. Some turn on at a specific temperature, and some turn off when the area being monitored by the switch reaches that temperature. At that point, the "brain" will activate or deactivate another device, such as a fan.

In the chart below, we note whether the part (switch or sensor) turns on or off at the noted temperature. The noted resistance measurements can be used for testing/checking for a properly working part.

LI3 SERIES 3000 LUMENS / SÉRIE LI3 3000 LUMENS

LI3 SERIES 3000 LUMENS

CODE C I KEYWORD 4

The ODX high-performance Li3 LED bulb is the most versatile and smart LED in our series. It can be installed in every location (low beam, high beam, fog light) and it is designed with a built-In ballast and without any moveable parts. It is comparable to 3000 lumens per bulb. Because of it's fanless and no ballast design, it can be submerged in water, mud or snow. For these reasons, it's the most recommended product for ATV, Side by side and Snowmobile. Our Li3 series is covered by our lifetime warranty .

- **Versatility:** Easy to install in low beam, high beam or fog lamps. —All types of vehicles and all-terrain vehicles
- **No External Driver:** The LED driver is internal on our Li3 LED bulb as there is no other piece attached on the wire. The heat generated by the LED Chips is dissipated in the aluminium base. The Li3 LED kit does not have any moving parts to reduce the risk of failure
- **Flexibility:** The small size of our Li3 bulb makes it very convenient for any customer looking to replace the bulb in their powersports vehicle
- **Installation:** Installs without any modifications. The LED bulb is adjustable 360 degrees to allow the light beam to aim horizontally and create a strong projecting light beam pattern
- **Instant Ignition:** The ignition of the chip is immediate once turned on so there is no need to warm them up as contrary to HID
- **Warranty:** Li3 LED product is under warranty as long as you own your vehicle —Lights are built to last over 30 000 hours

S6 SERIES 6000 LUMENS / SÉRIE S6 6000 LUMENS

S6 SERIES 6000 LUMENS

The S6 LED bulb is the most powerful in our range. Without any external ballast, it can be installed almost everywhere, even in the most restricted areas. Motorcycle owners greatly appreciate this LED bulb for its very intense lighting, its small size, his internal ballast and its light beam directed on the road while not blinding other drivers. It is comparable to 6000 lumens per bulb. Its double ball-bearing fan is very efficient for cooling, which increases the power of the chips and longevity considerably. Our LED assemblies project a ultra-white light with a wider spectrum than the original bulbs. The contrast of colours will impress you and increase your degree of safety on the road.

- **Versatility:** Plug n play operation
  —Easy to install low beam or high beam of any bikes or powersport vehicle
- **No external driver:**
  The LED ballast is built inside our S6 LED bulb as there is no other piece attached on the wire. The high-quality thermoformed plastic connectors are securely attached to the wire and will not break apart. The heat generated by the LED Chips is dissipated by the double bearing fan at his base
- **Flexibility:** The small size of our S6 bulb makes it very convenient for any customer looking to replace a bike bulb. You don't have to zip tie any ballast on the fairing, it's built-in!
- **Installation:** Install without any modifications. The LED bulb is adjustable 360° to allow the light beam to aim horizontally and create a strong projecting light beam pattern
- **Instant Ignition:**
  The ignition of the chip is immediate once turned on so there is no need to warm them up it as the HID
- **Warranty:** S6 LED bulb are warranty as long as you own your vehicle
  —Built to last over 30 000 hours
- **Design:** Comparable to 6000 lumens each bulb
- **Power:** Comparable to 3000 lumens per bulb
- **Reliability:** 100% waterproof, resistant to shocks, vibration and dust. Can tolerate weather conditions from -40c up to + 80c. NOT Recommended in fog light or ATV where mud or snow could cumulate and hit the fan which would result in product failure
- **Colour:** Cold white / 6500K
- When installed correctly, projects a horizontal light beam on the road, that will not bother drivers travelling in the opposite direction
- Compatible with: H1, H3, H4, H7, H8, H9, H10, H11, H11B, H13, H16, 9004, 9005, 9006, 9007, 9012, 880
- Compatible with DC voltage only

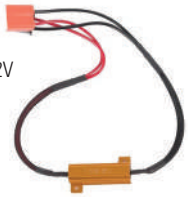
SMART DECODER H4 / DÉCODEUR INTELLIGENT H4

WHY USE AN INTELLIGENT DECODER AND IN WHAT SITUATIONS

- Allows control of the manufacturer's anomaly detectors
- Stabilizes power from car's computer to the LED bulb
- Output voltage to +/- 2% with identical connectors to those used by manufacturers —allows quick and easy installation
- Operating capacity of 8-24v DC in a robust water-resistant box superior to ip68 standards
- Material: Aluminum
- Operating Voltage: DC 9-32V



WHEN A DRL DECODER WILL NOT BE THE SOLUTION FOR PROBLEM:

In some American vehicles (Cherokee, 300, Charger) and some Mercedes that have a greater sensitivity to the variances of the bulb charge than the majority of manufacturers. If the original bulb has 55w and your ODX LED bulb has 30w, a 25w loss is perceived by the computer, which will turn on a burnt bulb signal on the dashboard. In some cases, such as the American models, the light circuit may shut down after a few days during an automatic test. Despite the fact that the Intelligent ODX decoder adds 5w to the circuit for a total of 35w and works in most cases, the vehicles listed above are more sensitive because there is still too much of a difference. In this very specific case, you will have to use the relays with capacitor with the add-a-circuit option and our 55w resistor sets from ODX.

INTELLIGENT FUSES / FUSIBLES INTELLIGENTS

CODE B | KEYWORD 4

The MINI® Fuse is quickly becoming the new standard for vehicle circuit protection throughout the world. Its miniature design, patented by Littelfuse, meets the need for more circuits to be protected while utilizing less space, and its ability to operate with high temperatures in adverse environments makes the MINI® Fuse the recommended choice for protection. Smart Glow fuses are innovative automotive style fuses (ATO, Mini, Maxi and glass tube) that feature an indicator light that glows when the fuse is blown, saving time to troubleshoot an open circuit.

SPARK PLUGS
BOUGIES

SERIOUS POWER FOR ALL TYPES OF ENGINES
UNE PUISSANCE SÉRIEUSE POUR TOUS TYPES DE MOTEURS

NGK Spark Plugs are available in many heat ratings for each application. Each rating has a wide range of operating temperature. Selection on the proper heat rating is determined by the condition of the engine and the way it is driven. Wide heat range is crucial for optimum engine performance. The plug must operate at a temperature hot enough to burn off deposits which cause fouling and misfiring; yet be cool enough to prevent pre-ignition. NGK's heat range is much wider than ordinary plugs. In fact, a single NGK Spark plug type often covers the range of two or three conventional plugs. At low speeds or in stop-and-go driving, NGK's will resist build-up and avoid fouling. The same NGK plugs will also resist pre-ignition problems when severe heat is generated by high speed or heavy load condition. One secret to NGK's wider heat range rating is advanced design, materials, and construction. With the introduction of the copper core in 1958, NGK dramatically changed spark plug technology. Copper's heat conductivity and electrical properties are superior to conventional plugs. Heat is quickly dissipated from the centre electrode and insulator to avoid plug damaging hot spots and to prolong plug life. NGK also engineered a longer insulator nose to minimize carbon build-up and reduce cold operation misfiring. Superior construction. Longer life. Optimum performance. All are standard with NGK, the brand specified as the source for serious power on more new automotive, motorcycle, snowmobile, marine and small engines than any other spark plug in the world.

NGK IRIDIUM IX SPARK PLUGS / BOUGIES D'ALLUMAGE NGK IRIDIUM IX

The NGK iridium IX represents the ultimate in spark plug technology and performance. The superior properties of Iridium allow for an ultra fine center electrode. 0.6 mm center ignitability and durability. The results are outstanding acceleration, high fuel efficiency and longer spark plug life.

- 0.6 mm Iridium center electrode tip —Designed to just the right size. It's not too thin, ensuring high durability and spark plug life. Not too thick minimizing the voltage requirement for a consistent stable spark
- Over 90% iridium alloy —The perfect blend to take advantage of the extremely high melting point and superior strength of iridium under extreme high performance conditions
- Trivalent metal plating —Superior anti-corrosion and anti-seizing properties at high temperatures

PREPARATION BEFORE PUTTING INTO SERVICE / PRÉPARATION AVANT LA MISE EN SERVICE

This battery is dry charged; which means that it could be put into service immediately after filling with acid, but we caution to ensure maximum life and performance from the battery it should be trickle charged for 4-10 hours to freshen the battery.

Failure by the retail selling entity or the purchasing user to undertake this protective measure will render the battery warranty null and void in the event of any subsequent alleged damage to the electrical components of the vehicle to which the battery is being fitted.

(1) Just before filling, remove the rubber cap and connect the exhaust tube with the exhaust opening.

(2) Remove filling plugs and fill cells to UPPER LEVEL indicating line with electrolyte (dilute sulfuric acid) having a specific gravity as follows;
Cold or Temperate Climate 1.260-1.280 at 20° C (68° F) Tropical Climate 1.220-1.240 at 20° C (60° F)
The electrolyte temperature when filling must not be lower than 15° C (59° F) nor higher than 30° C (86° F)

(3) Allow battery to stand for 1 hour after filling before placing on charge. If level of electrolyte has dropped, add more electrolyte until. UPPER LEVEL indicator line.

(4) Place on charge at the proper rate as given in TABLE. Charge until all cells are gassing freely, and the voltage and specific gravity are constant over three successive readings taken at 30 minute intervals. The total charging time will be about 10 hours.

(5) After completion of charge, adjust the electrolyte level to UPPER LEVEL indicator line.

(6) Replace filling plugs, neutralize and wash off any electrolyte which has spilled on the battery. Battery is now ready for service.

INSTRUCTIONS FOR DAILY MAINTENANCE / INSTRUCTIONS POUR L'ENTRETIEN QUOTIDIEN

(1) Check periodically.

(2) Add distilled water regularly. The level of electrolyte must always be kept above the LOWER LEVEL indicator line. When it is lower than this line, refill and adjust with distilled water to the UPPER LEVEL indicator line. Never use dilute sulfuric acid instead of water.

(3) Maintain battery in good charged condition. If head lamp becomes dim or horn sounds weak, or specific gravity is below 1.220 at 20°C (68°F) in cold or temperate climate or 1.90 at 20°C (68°F) in tropical climate it means insufficiently charged battery, so remove battery as given in TABLE, until cells are gassing freely and cell voltage and specific gravity remain constant.

(4) Keep battery clean and dry. Periodically clean and dry outside of battery. Special attention should be given to ensure that the terminals and connections are kept clean, dry, and free from corrosion.

CAUTION DURING OFF-SERVICE / PRÉCAUTION PENDANT L'INACTIVITÉ

Battery should be charged once a month when not in service.

SPX BATTERY WARRANTY / GARANTIE DE BATTERIE SPX

All SPX batteries are warranted for 1 year providing battery has been well maintained and serviced as per manual. This warranty covers replacement of the battery only, any other costs incurred are not covered.

The 2011-2014 model rangers have lighter duty rear axles than previous year models and are more prone to breakage. **NOTE:** High Lifter's Pro Series Alignment Kit (PSAK-1) is REQUIRED if you own or are buying PLK800R-50 or ANY brand of Ranger lift kit and have upgraded or are upgrading to the Pro Series Ranger Tie Rod/Rack End Kit. This kit also upgrades from the OEM 10mm bolt to a 1/2" Gr. 8 bolt to match the heavy duty heim joint in our Tie Rod/Rack End Kit. The alignment kit comes with 2 alignment cones and all hardware required to upgrade both sides of the Ranger.
