MOS2 (TEFLON/MOLYBDENUM) COATED SKIRTS

A Rolled-On Application Process provides a bond that is 10 times stronger than other spray on coatings. Benefit include increased heat transfer, reduced friction, and helping to eliminate cold seizures.

MACHINED SMOOTH HEADS

Reflects combustion heat and reduces Carbon buildup, protecting the top of the Piston. Some tests have shown this feature can increase horsepower and fuel economy by up to 6%.

ANODIZED DOMES

Increases heat resistance and durability; pistons with Anodized Domes are 75% stronger than Non-Anodized Pistons.

WAVEWERX DRIVE SHAFT ARBRE D'ENTRAÎNEMENT WAVEWERX

The drive shaft is a mechanical component that transfers power from the crankshaft to the impeller.

The shafts are typically threaded on the one end and splined on the other.

These threads and splines carry all the torque of the motor and can degrade from friction and fatigue.

An aerial, high-angle photograph of a white speedboat with a dark canopy, moving across dark, choppy water. The boat is leaving a white, frothy wake behind it, which tapers off towards the top of the frame. The water's surface is textured with small waves and ripples.
