V-FORCE3 REED VALVES / VALVES À CLAPETS V-FORCE3

Symmetrical Petals / Lamelles symétriques: The VForce3 now uses symmetrical reed petals. No longer will you need to be concerned with having both "inner" and "outer" reed petals.

Super Quick Petal Changes / Changements de lamelles ultra-rapides: The VForce3 incorporates the industry's first and only patented snap together reed valve design. The entire assembly is completely screw free, meaning that when reed petals need changing the job is now literally a "SNAP".

Custom Air Guides / Guides d'air personnalisés: Custom air guides specific to each individual application ensure the maximum airflow and benefits of the VForce3 reed valve system in your motorcycle or ATV.

Advanced Composite Technology / Technologie avancée des composites: The VForce3 utilizes an advanced composite technology with an all new carbon fiber lay-up and resin system. This new lay-up was designed entirely around the reed cage design of the VForce3 for superior performance and response.

Redesigned Reed Stops / Butées de clapets redessinées: A new improved reed stop design completely eliminates the need for retaining screws. This new feature now removes any possible chance of a failure.

Airfoil Technology / Technologie de profil aérodynamique: Airfoil shaped (flat on bottom/curved on top) reed tip surface increases velocity of fuel/air mixture as it passes through, creating the optimum fuel atomization.

ATV/UTV DRIVE BELTS / COURROIES ENTRAÎNEMENT POUR VTT/CÔTE À CÔTE DAYCO

HP

Designed for ATV, golf cart and farm utility applications using low to mid-range horsepower 350cc engines with no modifications.

Designed to provide dependable, smooth performance for leisure, care-free trail riding and yardwork for today's lower horsepower all-terrain vehicles, golf carts and farm utility vehicles. Fast becoming the belt of choice for these applications, the HP ATV Belts are manufactured from a specially formulated fiber reinforced polychloroprene rubber compound and aramid cords. They deliver superior strength and dimensional stability for long lasting belt life.

HPX

Engineered for UTV and ATV applications with mid-to-high horsepower engines between 350cc-600cc with minimal upgrades/modifications.

From mud holes and rocky trails to hill climbs or desert treks, the Dayco HPX ATV Belt delivers unparalleled performance and reliability for today's mid-to-high horsepower UTVs and ATVs. Constructed with an external cog design for increased flexibility and extra strong aramid cords and fiber-loaded rubber compound, the Dayco HPX ATV Belt has been proven to run cooler and last longer than competitive belts. Dayco HPX ATV Belts deliver the performance and durability demanded by today's smaller, higher output engines and the enthusiasts who drive them.

XTX

Developed for higher performing ATV and UTV applications with up to 120HP, moderate performance upgrades and engines up to 800cc.

Are constructed with specially formulated, high temperature polychloroprene with an aramid fiber reinforcement for increased horsepower capacity and more responsive engine braking during deceleration. This belt is proven reliable at well over 12,000 rpms, for faster, more consistent throttle response and improved durability. The Dayco POWER XTX ATV Belt's breakthrough design features deeper cogs on top and rounded cogs on the bottom for ultimate flexibility, longer belt life and cooler running temperatures compared to leading competitors.

COOLANT TEMPERATURE SENSORS / CAPTEURS DE TEMPÉRATURE DU LIQUIDE DE REFROIDISSEMENT

BRONCO
ATV & UTV COMPONENTS

These Bronco sensors & switches monitor temperatures. If faulty, they either send signals to the machine's electrical "Brain," which can activate a warning light, shut down that part of the system, or shut down the entire engine. Usually, these are located in the cylinder block, oil cooler, or cooling system.

Switches are set up per specific temperatures. Some turn on at a specific temperature, and some turn off when the area being monitored by the switch reaches that temperature. At that point, the "brain" will activate or deactivate another device, such as a fan.

In the chart below, we note whether the part (switch or sensor) turns on or off at the noted temperature. The noted resistance measurements can be used for testing/checking for a properly working part.

FORK SEALS & BUSHINGS / KIT DE JOINTS ET BAGUES POUR FOURCHE

Fork And Dust Seal Kit / Kit de joints spi et de joints anti-poussière pour fourche

The seal profile is engineered so that each seal lip places equal pressure on the fork tube. Equalized seal pressure creates less drag and longer seal life. The seal incorporates a 3rd seal lip which acts as an additional dust wiper to keep the fork tubes clean of dirt and grit. Dust Seals features external garter springs to keep the fork tubes clean

BRAKE PADS & SHOES / PLAQUETTES DE FREIN

ROCK HARD CONTINUES TO OFFER THE BEST IN AFTERMARKET PERFORMANCE BRAKING COMPONENTS.
 ROCK HARD CONTINUE D'OFFRIR LE MEILLEUR EN ÉLÉMENTS DE FREINAGE.

When looking for brake pads, the key thing to remember is the coefficient of friction rating for that pad. This is a 2 letter ratings system (see graph below). The first letter is the cold temp coefficient rating and the second letter is the hot temp coefficient. The higher the letters, the higher the coefficient of friction.

**SEMI-METALLIC:**

0.44 0.45 at both Temps 0.22%
 Fade Possible At 600f

Our semi-metallic brake pads & shoes are composed of a non-asbestos, semi-metallic carbon kevlar aramid fiber from DuPont.

**COEFFICIENT OF FRICTION (C.F.)
AT 250F & 600F**

This pad is well suited for most conditions. It has a minimal fade at high temperatures, and is good for performance applications.

FF | DOT RATING

GG | DOT RATING

FULL-METAL PADS

0.45 - 0.50 at both Temps Fading Very Rare

Our full-metal pads are composed of copper, carbon, tin, lead & other metallic elements.

**COEFFICIENT OF FRICTION (C.F.)
AT 250F & 600F**

This pad is great for most conditions, as it will bed quicker on worn discs. This rating is great for performance applications.

CALIPER PISTON KITS / KITS DE PISTON DE ÉTRIER

Stainless steel reduces thermal conductivity by up to 90% compared to aluminum.

- Reduced braking temperatures provide better braking performance
- Eliminates the potential for becoming brittle or corroded like composite or chrome plated pistons, thus extending braking performance
- Eliminates failure prone ceramic inserts used on some models

ATV/UTV ENGINE DRAIN PLUGS / BOUCHONS DE VIDANGE DE MOTEUR POUR VTT/CÔTE À CÔTE

The stock drain plug has two issues: the Allen head fills with dirt and strips out easily and the magnet is weak. We solved both issues with these machined steel drain plugs. Simply use a socket to remove and install and our magnet is 10 times stronger than stock! Finished with a beautiful Black coating and the Quad Logic gear logo. Includes a new crush washer.

ATV BEARING GREASER TOOL / OUTIL DE GRAISSAGE DES ROULEMENTS POUR VTT

It's a well known fact that the stock wheel bearings are dangerously low on grease right from the factory and bearings will wear out quickly if you don't pack them with additional grease. Keep them running longer and stronger by using this trick bearing greaser. It handles all the dirty work for you. Just remove the wheel and axle nut, slide the greaser in place and pump it full of grease. You'll be amazed at how much grease they will take.
